About the author and her publications
M.K. Minishi-Majanja is currently Associate Professor and Chair of the Department of Information Science at the University of South Africa. Her research interests lie in LIS education, library automation, information provision, collection development and school libraries. Minishi-Majanja has authored and co-authored numerous articles and conference papers, many of which deal with LIS education and information and communication technology. Employed at the UNISA since 2005, she has previously served as a lecturer and/or librarian at several Kenyan universities and colleges.

There are three links available on her Web page to full-text versions of her articles. However, there are many more articles that are not linked, including the article cited above, which is published in an open access journal.

UNISA has an institutional repository called UnisaIR, which is linked to from the university library’s home page (under Institutional Repository). When browsing by author’s name, there are five objects listed under Minishi-Majanja. However, these are dissertations from students that Minishi-Majanja has supervised, as opposed to her own works. The dissertation that led to this article, written by co-author F.W. Dulle, is in the institutional repository.
