About the author and her publications:

Hanneke De Jaegher is a researcher in philosophy and cognitive science through the University of the Basque Country’s Logic and Philosophy of Science department. She is currently working on a project titled “Interaction Dynamics and Autonomy in Social Cognition”. She is a visiting researcher at the Centre for Computational Neuroscience and Robotics (CCNR) and Centre for Research in Cognitive Sciences (COGS) at the University of Sussex, Brighton, UK.

The author has published numerous journal articles, authored and co-authored chapters in books on the subject of social cognition, and has published 2 books. She also has a lot of experience with lectures and presentations. According to her CV, Dr. Jaegher explores the questions: What role do the dynamics of embodied social interaction play in social and in general cognition? And in our experience of ourself and of others? What is a science of intersubjectivity?

She was born in Belgium, received her PHD from the University of Sussex in Cognitive Science, and received her Licentiate in Philosophy from the University of Brussels. She speaks Dutch, German, Spanish, English and French.

There are links to her research from her web page, including the article I found her research article cited in.

I could not find an institutional repository through the University of the Basque Country.
